

WARRANTY AND RETURNS

All systems purchased directly from www.vitev.com come with a 30-day risk free trial which starts when the system arrives at your home.

If you choose to return your system, you will be responsible for the return shipping costs. We are not responsible for damages to units while in transit for return.

Please hold on to the packaging and accessories during the trial period as returns must be received in "as new" condition.

If you purchased your system from a retailer (anywhere other than www.vitev.com), please refer to their return policy and coordinate with the vendor.

REMIN

USER GUIDE

INSTALLATION

- 1 Turn off the water supply at the tank using the ball valve typically attached to the top or side of the tank.
- 2 Open the faucet and drain what water is left in the tube.
- 3 Find the tube that leads to the faucet and determine where you would like to place the REMIN.
NOTE: If you have 3/8" diameter line (very uncommon), you will need a 1/4" x 3/8" coupling available from any hardware store.
- 4 Connect the included 2 sided mounting clip onto the RO membrane if that's where you are placing the REMIN or attach the single sided clip to the wall using the included screws.
NOTE: Mount the REMIN horizontally.
- 5 Insert the tubing into each end of the REMIN by pushing into the compression fitting fully.

- 6 Turn the water back on and check for leaks.
- 7 Flush the line for a minute or two and enjoy.

TYPICAL RO SETUP

FREQUENTLY ASKED QUESTIONS

What's the best way to test the water?

pH testing (aka reagent) drops are the easiest and most cost effective. A couple drops into a sample of water will immediately turn the water a color representing a specific pH level. **DO NOT USE STRIPS** as they do not perform well with alkaline water.

Can I give this water to children?

Absolutely...in fact, watch how kids are drawn to the water. Ask them how they like it.

How long will the water stay "good"?

Naturally created alkaline water is very stable. It's always best to drink it as fresh as possible, but you'll also find a sustained shelf life. Filling a thermos or bottle and taking it to work, the gym or a couple bottles for the trip out of town is highly encouraged.

Is it OK to heat (or chill) the water?

Yes. There will be some minor change in pH, but that is more due to extended contact with the air than the temperature changes.

Is some air pressure buildup normal after not using the REMIN for a while?

Yes. A little air buildup is very common, especially first thing in the morning with a new REMIN. Turn the water on slowly and allow any pressure to bleed off slowly. This will decline with use.

Why does the water look cloudy?

What looks cloudy is actually thousands of little bubbles resulting from the ionization process. You'll see them rise to the top and collect along the outside of the glass. These are not like what you see in carbonated soda. These are bubbles you should drink.

When do I know when to change the REMIN?

With average use (about 2 gallons a day), REMINs will last about 12 months. You'll notice very quickly that Vitev water goes down easier than tap or bottled. These characteristics will go away as the minerals are used up. If you are checking pH, the pH level will also decline over time. Once it goes below 8.0, probably a good time to replace.

TIPTOE INTO THE WATER

The best way to incorporate Vitev water is to ease into it. Unless you've been consuming a lot of alkaline water previously, we suggest giving yourself a few days to adjust. It's very common to develop a craving as your cells wake up to true hydration; we just don't want you to overdo it.

So start with a couple glasses through the first day, especially if you don't normally drink much water. Gradually increase until you are at least drinking 1/2 of your weight a day in ounces. So if you're 150 pounds, shoot for 75 ounces. If you work out, or live in a dry climate, add a little extra.

Vitev water should be used for any drinking* or cooking application. Soups, teas, nutritional shakes, coffee, homebrews, etc are all better when you use better water.

When used correctly, the benefits of Vitev water are wide ranging. Some notice differences very quickly, while others take some time; we're all unique. Whatever you feel, we'd love to hear from you.

*The only exception is medication. Take pharmaceuticals with tap or bottled water so as not to affect the normal delivery process.

HOW TO CHANGE THE REMIN

- 1 Turn off the water and open the faucet just like when you installed it.
- 2 Disconnect the tubes by pushing the collar (see photo on right), you'll see it around the tube, towards the REMIN and pulling the tube out at the same time. NOTE: if a video helps, we have one posted on our Youtube channel, search VitevTV.
- 3 Insert the new REMIN into its place, turn on the water again and flush the water for a few minutes.
